

May's Kennedy Tank Talk

- **Kennedy Tank Special**

- Pat Kennedy drove the Kennedy Tank Special around the track at Carb Day this year topping speeds of 100 miles an hour! Kennedy Tank sponsored numerous cars in the race from 1936-1952 with a top finish of 8th place in 1936.

- **Record thickness and diameter currently in the shop!**

- We are proud to announce that we have expanded our capabilities with two recent projects we have taken on.
 - We currently are fabricating (4) tanks that are 16'-6" OD X 36'-6" straight side height. This marks the largest diameter of a tank we have ever built in our shop!
 - We are also fabricating a pressure vessel that is 2" thick which will hold a PSIG of 1,100. This marks the thickest vessel we have fabricated in our shop!

- **Near Record Field Erected Tank Project!**

- Our field division is currently working on a project that entails (2) field erected API 650 tanks that are 92' OD by 48' shell height made of A36 carbon steel. Although we have field erected larger diameter tanks in the past, these tanks will be in the top 20 of largest tanks our field division has built!

- **Available Capacity**

- We do have available capacity in our shop over the next 6-12 weeks and would love to quote any shell and tube heat exchanger, ASME pressure vessel, and tank projects you are working on!

*Please email me if you would no longer like to receive these monthly emails.
