

November's Edition of Kennedy Tank Talk

Team,

Thank you for reading November's edition of Kennedy Tank Talk. Below are some updates from the Kennedy Tank Team.

Chili Fundraiser for the United Way

Last Friday we had our chili potluck fundraiser for the United Way. Twenty five teammates brought their own rendition of their best chili and votes were held to see who had the special sauce. Congrats to **Kevin Bolin** on winning this prestigious award! Our third and final event for the United Way will take place this Friday with our annual Cornhole tournament.

Welcome Ryan Wheeler to the Kennedy Tank Team

Ryan recently joined Kennedy Tank as a project engineer. Ryan graduated from IUPUI in Purdue's School of Engineering & Technology with a mechanical engineering degree in 2019. Ryan is already off to a great start and has quickly become a valued teammate,

Recent Half-Pipe Jacket Project

Earlier this month, the Kennedy Tank team fabricated and delivered this 11' OD X 9'-8" tangent length vessel with a flat top and dished bottom made of 516-70 carbon steel. This vessel also had an outer half pipe jacket on the bottom head and shell which required full penetration welds. Nice work team!

Importance of the weld test

All new hire welders are given a hands on welding evaluation along with on the spot critiquing from our QC department. Each welder is evaluated on bevel preparation, MIG roots and flux core fill, cover passes, and weld sizes. We also cover the basics of grinding, grinder equipment and grinding wheels. This in depth weld test plus interview process has allowed us to keep and retain some of the best and brightest craftsman in the industry.

Did you know?

Kennedy tank has been fabricated ASME pressure vessels since 1931 and is nearing our 10,000th shop built ASME pressure vessel. We are currently the fifth oldest ASME pressure vessel fabricator in the United States that is still in existence. Check out the deodorizer to the left which we built back in 1970!

We do have room in our production schedule and would love to help out with any pressure vessel, heat exchanger, or tank projects.

Sincerely,

Jim Kennedy: Jkennedy@kennedytank.com, 317-780-3523

Tim Noyes: Tnoyes@kennedytank.com, 317-780-3526

Jim Dossman: Jdossman@kennedytank.com, 317-780-3554

Paul Bolin: Pbolin@kennedytank.com, 317-780-3528
