

February's Edition of Kennedy Tank Talk

Team,

Thank you for reading February's edition of Kennedy Tank Talk. Below are some updates from the Kennedy Tank Team!

Quality Control Team

One of the biggest things that set us apart from our competition is our commitment to building quality vessels and tanks. This all starts with our welding culture and permeates through our QC department who along with the welders and foremen sign off on every weld for every tank and vessel. We have (3) CWI's on our QC team and a team of (5) gentlemen who are the best in the business!

Hydro Testing (2) 28,000 Gallon Pressure Vessels

These were 12' OD X 30' tangent length weighing 50,000 pounds apiece with spot x-ray, vacuum rings, and on (2) support saddles shipping to a chemical plant in Kentucky!

Fall Protection Training

Last week we had the team in from 3M to discuss fall protection basics with demonstrations on inspection, understanding fall distances, and proper applications. We continue to up our game when it comes to a safety-first approach in our manufacturing and customer locations. Thanks to Greg Anderson for setting up this training!

Production Employee of the Month!

Big Shout out to **Garry Maxwell** who is the "King of the Sub Arc" for winning Kennedy Tank production employee of the month in January. Garry passed 100% of his x-rays throughout the month and more importantly, always goes the extra mile for his teammates and keeps a consistently positive attitude throughout his day. We are lucky to work with you, Garry!

We do have room in our production schedule and would love to quote your next heat exchanger, pressure vessel, or tank project!

Sincerely,

Jim Kennedy: [Jkennedy@kennedytank.com](mailto:jkennedy@kennedytank.com), 317-780-3523
