

## The November Edition of Kennedy Tank Talk

Team,

Thank you for reading the November edition of Kennedy Tank Talk. Read below for updates from the Kennedy Tank Team.

### Kennedy Tank Manufacturing goes 1 year without a recordable injury!

We want to shout out the entire Kennedy Tank production team for making it one year without a recordable injury. Safety is our number 1 priority and many thanks to **Kara Seebacher** (Safety & Environmental manager) and all of our **production teammates** for looking after each other and putting safety at the forefront of everything we do here at Kennedy Tank. Well done!

### John Cochran 40th year anniversary!

The dean of engineering, **John Cochran** celebrated his 40th year anniversary here at Kennedy Tank.

John has been leading our engineering team since 1990 and is one of the best ASME pressure vessel engineers in the country.

John is one of the most ethical, genuine, and caring people many of us have ever been around and we couldn't be luckier to have him on our team. He continues to mentor and train the next generation of engineers at Kennedy Tank all the while being a resource for our more experienced engineering teammates as well.

Thank you for all that you do John!

## 30,000-40,000 SS Tanks

The Kennedy Tank team has been on quite the run of building dozens of 30,000-40,000 stainless steel API 650 tanks. Our ability to fabricate tanks up to 14' diameter allows us to continue to lead the market on large diameter shop-built tanks. To the left, we are ready to hydro, wash, and clean (2) 40,000 gallon SS API 650 tanks.

**We welcome customers to come to visit our shop!**

Last week, we had a customer here to inspect (2) 1.5" thick full x-ray, PWHT carbon steel vessels we were in process of fabricating at our plant. We welcome all customers and potential customers into our facility to meet our team and see why Kennedy Tank is the leading vessel fabricator in the country!

**Ready to Partner on your Next Shell and Tube Exchanger Repair Project!**

The Kennedy Tank field division received a call on a large 4,400 tube condenser in the Midwest and sprung to action. We were able to remove all 4,400 tubes and insert new tubes which were expanded in an expedited fashion. We also replaced both tube sheets on this unit which was added to our scope while we were on-site. We completed this job safely and on time. Well done team!

Sincerely,
