

The December Edition of Kennedy Tank Talk

Team,

Thank you for reading the December edition of Kennedy Tank Talk. We all want to wish you a very happy holidays from the Kennedy Tank team!

Large Tower sent to a customer in Illinois

This tower was 78" ID and 150' long built-in three bolted on sections weighing 50,250 pounds. Our customer let us know that they appreciated our commitment to top quality and shared that the tower fit together in three sections on-site as originally planned. Well done team!

Kennedy Tank Giving Back!

The Kennedy Tank team has stepped up to the challenge once again by donating food and money to the adopted families foundation in Indianapolis.

2021 also marks the 25th year Kennedy Tank has organized several events to fundraise for the United Way Foundation.

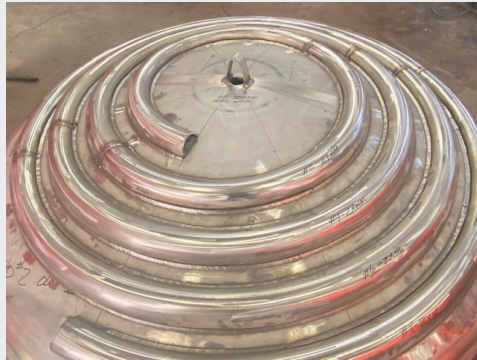

This year we organized a chili cook-off, hot dog and burger grill-out, and corn hole tournament which resulted in a record amount of donations from the Kennedy Tank Team. Thank you, **Bridget Saylor!**

The annual field safety day took place in early December which entails all Kennedy Tank boilermakers, pipefitters, and laborers coming to Kennedy Tank to discuss ways in which we can evolve our current safety program and culture.

We had over 80 teammates safely here participating in CPR training, crane signaling, respiratory protection, confined space entry, first aid, gas monitoring, and much more.

Thank you to the queen of safety, [Kara Seebacher](#), [Scot Evans](#), [Dave Reinkemeyer](#), [Jason Shaw](#), [Heath Knipp](#), [Bill Kennedy](#), and [Vince Easler](#).

Half Pipe Reactors

The team continues to see increases in half-pipe jacketed vessels as well as conventional, dimple, and vessels with internal coils. We have become one of the leaders in fabricating high-quality reactor vessels and would love the opportunity to discuss our next jacketed vessel project!

Ready to Partner on your Next Field Erected Tank Project

The Kennedy Tank field division remains ready to partner on your next field-erected tank project. We have experience building field tanks anywhere from 10'-100' diameter in all kinds of thicknesses and alloys. We currently have projects in progress or about to start in Indiana, Michigan, and Ohio,

We want to wish all of you happy holidays from the Kennedy Tank Team!

Sincerely,

Jim Kennedy: Jkennedy@kennedytank.com, 317-780-3523
